

Years of Prior Reports, One Structured Patient View

Live in the reporting workflow today; pilot and production adoption not yet evidenced.

Before Search → read every prior report → summarise mentally

After Open exam → summary ready → validate → report

- **Faster review**
Prefetched before the exam opens
- **Better context**
Findings, progression and procedures together
- **Consistent structure**
Structured to USCDI v4 / C-CDA

Problem List				
Problem	Status	First Noted	Last Noted	Notes
Severe bilateral internal carotid artery stenosis (>70%)	Treated	03/01/2023	02/13/2025	Bilateral TCAR stents placed 2023; stents patent with satisfactory hemodynamics as of 02/13/2025. No cerebrovascular symptoms reported at last follow-up.
Atherosclerosis with intermittent claudication, bilateral legs (ICD: I70.213)	Active	03/08/2023	04/02/2026	Left > right calf claudication <100 yards, especially on incline, as of 04/02/2026.
Atherosclerosis with ulcer of heel/midfoot, left leg (ICD: I70.244)	Healed	03/08/2023	04/02/2026	Left heel ulcer reported healed and doing well at 04/02/2026 visit. Small irritation noted on right 5th toe at that time.

AI History Summary — demo data, identifiers removed.

BUSINESS VALUE

Less re-reading; history harder to miss

IMPACT / EVIDENCE

Generated today; time saved not yet measured

EFFORT & SCOPE

Effort not documented · v5.21, v5.22

Governed Console for Server Health and AI Forecasts

Monitoring, approval-gated actions and forecasting are built; secure file transfer and agent relay remain.

Detect → Forecast → Recommend → Approve → Act → Audit		
COMPLETED ▪ Health and capacity dashboard ▪ Approval-gated commands, audited ▪ Disk, memory, CPU forecasts	IN PROGRESS ▪ Governed file transfer ▪ Staged relay rollout ▪ Automation rules	NEXT ▪ HL7 and PACS monitoring ▪ Contract alerts from CRM ▪ Plain-language ops assistant
BUSINESS VALUE Faster triage; fewer inbound paths to customers	IMPACT / EVIDENCE Expected benefits; no measured MTTR data yet	EFFORT & DEPENDENCIES Sizing to be confirmed · agent rollout, Matcha

Four Themes, One Recommended Starting Point

Preliminary R&D sizing, not delivery commitments; full initiative list in the notes.

THEME	BUSINESS VALUE	EFFORT	PROPOSED NEXT STEP
Reporting quality & safety	Catch prelim-vs-final discrepancies	Medium-Large	Pilot with one customer
Operational intelligence	AI triage of HL7 and interface failures	Medium	Extend Sentinel to HL7 / PACS
Engineering productivity	AI test automation and codebase access	Small-Medium	Continue the existing POC
PACS independence & platform	Retire EMR dependency; object storage	Large	Run the object-storage POC first

RECOMMENDATION — NO ASK DOCUMENTED IN SOURCES

Approve discovery funding for the discrepancy detector; confirm HL7/PACS in the next Sentinel increment.
